Sabrient Systems Launches Stock Ranking Web Application for Professional Investors

SANTA BARBARA, CA, March 22, 2006 — Sabrient Systems has launched a new web application called SmartLink® that offers a user-friendly way to access its professional stock research.

SmartLink offers a bridge between the company's SmartRank® scorecards, which identify top-ranked stocks from various market segments, and its SmartStock® reports which offer in-depth company-by-company analysis.

Starting with a 6,000-stock database that has been winnowed to the most compelling 600 SmartRank stocks, a SmartLink user can 'slice and dice' this select database in a variety of ways. The user may request the highest scoring 10, 20 or 50 stocks from among four market caps (large, mid, small and micro) and three investing styles (value, growth or momentum). For example, one user might request the top small-cap value stocks, while another might wish to see the top large and mid-cap growth and value stocks. A click on a ticker in the SmartLink report links the user to a SmartStock research report on the company, prepared by Sabrient's proprietary interpretive text generator.

"SmartLink allows investors to see both the forest (comparative rankings) and the trees (company specific information) through a seamless link," noted Guy Kraines, Sabrient's president. "More important, Sabrient's proven performance gives investors the confidence to act on the results."

Sabrient Systems, LLC (<http://www.sabrient.com>) is an independent research firm specializing in unbiased, fundamentals-based, quantitative equity research. Sabrient's proprietary methodology, developed by Chief Market Strategist and industry pioneer David Brown, employs multi-factor filters and fuzzy-logic scoring on over 6,000 U.S.-traded equities to identify stocks that appear poised to outperform or under-perform the market. Founded in 2000, the firm offers several investment research products for professional money managers and individual investors and is an independent research provider to seven of the 12 Wall Street investment firms that were parties to the Global Research Analyst Settlement of 2003.
